

# WHY IT'S IMPORTANT TO GET VACCINATED FOR HEPATITIS B

The CDC recommends hepatitis B vaccination for all adults aged 19-59\*

## WHAT YOU NEED TO KNOW

Hepatitis B is a vaccine-preventable liver infection caused by the hepatitis B virus (HBV)

HBV is a leading cause of cirrhosis and liver cancer globally

There is no cure for hepatitis B. Vaccination is the best way to prevent hepatitis B

HBV is up to 100 times more infectious than HIV

The threat can linger—HBV can live on surfaces for at least 7 days

~296 million people are living with hepatitis B†

## GETTING PROTECTED

HEPLISAV-B is the only adult hepatitis B vaccine that protects you with just 2 doses in 1 month

# 2 DOSES IN 1 MONTH

\* The CDC also recommends hepatitis B vaccination for adults aged ≥60 with risk factors. Adults aged ≥60 without risk factors may receive hepatitis B vaccination.

† Estimate based on World Health Organization data from 2019.

CDC, Centers for Disease Control and Prevention.

## INDICATION

HEPLISAV-B is indicated for the prevention of infection caused by the hepatitis B virus in adults 18 years of age and older.

## SELECT IMPORTANT SAFETY INFORMATION

If you have a history of severe allergic reaction after a previous dose of any hepatitis B vaccine, or to any ingredient of HEPLISAV-B, including yeast, do not take HEPLISAV-B.

Please see additional Important Safety Information on next page and [click here](#) for full Prescribing Information.

**HEPLISAV-B®**  
Hepatitis B Vaccine (Recombinant), Adjuvanted  
**2 DOSES. 1 MONTH. DONE.**

**REMEMBER TO SCHEDULE YOUR SECOND SHOT FOR A MONTH LATER.**  
It's important that you receive both shots to be fully protected.

**TEXT HEPB TO 1-844-402-4372** and we'll send you a reminder  
when you're due for your final dose of HEPLISAV-B.

HEPLISAV-B has the same insurance coverage as all other CDC-recommended adult vaccines.

## INDICATION

HEPLISAV-B is indicated for the prevention of infection caused by the hepatitis B virus in adults 18 years of age and older.

## IMPORTANT SAFETY INFORMATION

If you have a history of severe allergic reaction after a previous dose of any hepatitis B vaccine, or to any ingredient of HEPLISAV-B, including yeast, do not take HEPLISAV-B.

HEPLISAV-B must be given by a medical professional, who will monitor you afterwards to check for allergic reaction.

If you are immunocompromised, or receiving immunosuppressant therapy, you may have less of an immune response to HEPLISAV-B.

Some people have hepatitis B infection without being aware of it or showing any symptoms. If you already have hepatitis B present in your body, HEPLISAV-B may not prevent hepatitis B infection.

The most common side effects reported by patients within 7 days of vaccination with HEPLISAV-B were pain at the site of injection (23%-39%), tiredness (11%-17%), and headache (8%-17%).
